Subject: Work at home tasks completed 5/31/2019

Hello Barbara,

This is a list of work at home tasks completed today, 5/31/2019:

- Reached out to Jan Collins regarding obtaining rights for entering EI accomplishments into RCRAInfo V5. We may need to do some of this data entry for HDOH, and when I signed in and started looking through the database, I realized I don't have authorization to enter this info.
- Reached out to Nolan Cooney regarding tentative dates for construction of the vapor mitigation system and asked about what activities are currently taking place at the site.
- Updated and ran a SplatR report and sent to Sarah Samples for the GPRA EI QC effort.
- Had a call with Linda Moore regarding my local travel vouchers. I submitted the information she requested, which included additional information on the purpose of each of the site visits.
- Sent Mark Withrow with POLA an email with directions on how to proceed with the TSCA application for risk-based cleanup for Wilmington Marine Services. The site investigation report was very comprehensive and very detailed in describing the various sampling activities that have taken place from 1990s until more recent. I instructed them to how to proceed and sent them the checklist from Tool 4 in PCB FAST. Long-term monitoring plan will also be a major component in ensuring that surface water sediments are not continuing to be impacted by on-site contamination.
- Sent Steve Armann a request to reach out to DTSC regarding the metals, TPH, VOC, and SVOC contamination at Wilmington, and let him know that now would be an ideal time for DTSC to get involved in the removal effort since characterization has just been completed and elevated concentrations of many COCs have been detected. Now that the workplan for the removal effort is being prepared by POLA, DTSC can provide the RP with feedback on what they want included in their report.
- Reviewed Safety Kleen RAU write-up from Anthony Leverock.
- Reviewed notification from Devon Rowe on subsurface tar discovered today at the former Tanklage site during trenching for construction purposes and path forward.
- Just received and began review of the Revised Draft RAP for Riverside Scrap Iron and Metal.

Thanks!

.....
